

CASE STUDY

INDUSTRY : HEALTH

CUSTOMER : ONCOLILLE

LOCATION : Lille, France

BACKGROUND :

The Lille ONCOLille Interdisciplinary Cancer Research Institute is designed to allow the daily interaction of over 250 researchers and clinicians from multidisciplinary teams. Located at the heart of the university hospital campus, the ONCOLille Institute is ideally situated to develop excellent research and to integrate it into its local environment.

SCOPE OF WORK :

For the comfort of people, maintaining a relative humidity between 40% and 60% is important. Furthermore, a controlled environment limits the risk of bacterial growth, the spread of viruses and the re-suspension of particles and dust. This is why the institute decided to use our services and products. The project includes a set of 2 RTH humidifiers, as well as additional accessories such as hygrometers, hoses and stainless steel steam diffusion pipes.
